Regional Victoria's Premier Plastic Moulders.

December 8th, 2005

Tandex Chemicals
P.O. Box 166
Bayswater, Vic. 3153

As discussed earlier, some 7 to 8 years ago we were experiencing enormous production and maintenance problems with corrosion and scaling in our Injection Moulding Machines and Dies caused mainly by poor water quality and lack of a water treatment program.

We were recommended to Tandex Chemicals to solve our water quality problems. Since Tandex has been handling our water treatment we have had minimal production and maintenance problems associated with corrosion and we have also in some cases been able to increase our production cycle times. Not only has this been a huge cost saving to our company it also helps us to comply with Government Health Regulations.

Tandex now controls our entire water treatment program which enables us to concentrate on expanding our business.

Kind regards,

Jim Robertson
