

23rd November 1999

To Whom it may concern,

Our company is a medium size business involved in the garment rental, industrial laundry industry.

We have on our site three boilers 1 * 200 hp fire tube construction and 2 water tube constructions of 150 hp. and 125 hp.

We use steam for various production purposes.

I have been the Plant Engineer for the past six years and in that period of time have had Tandex Chemicals supplying our boiler treatment chemicals.

To date our annual inspections of our boilers we have had a glowing report from our service company (Hunt Engineering) and from the inspectors on how clean and condition our boilers were in.

When opening up of our water tube boilers it was found to have less than a cup full of residual mud build up and little to no scaling in the tubes a similar comment was made on the fire tube boiler

We appreciate the monthly service provided by Tandex Pty.Ltd. and their professional help and advice.

John Kane
Plant Engineer
