Ref. No. JP:lp

15th December, 1987

TO WHOM IT MAY CONCERN

Maroondah Hospital commenced dealing with Tandex Chemicals in 1985, when the Hospital introduced their chemicals into the feed water of our two Trevor A Steam Generators.

Since the introduction of these chemicals, a marked improvement has been noticed in their efficiency and a definite reduction has occurred in the amount of maintenance required. The condition of the steam generators has been noticeably improved and all treatments undertaken have produced excellent results.

The Hospital has found Tandex Chemicals to be extremely competitive in price and the after sales and delivery services have been faultless.

As a member of the Engineering Department at Maroondah Hospital, I would have no hesitation in recommending the chemicals, supplied by Tandex Chemicals, for steam boilers or generators, to any intended future users.

J. Postlethwaite,
Assistant Engineer.
