**To Whom It May Concern**

Toward the end of 1986 we began using Tandex treatment of our boiler feed water. Prior to that time we had experience failure of some boiler tubes and serious pitting of others. The use of Tandex has overcome these problems and we now have a problem-free boiler so far as the water treatment goes.

Regular testing and follow up by the Tandex representative is much appreciated and genuine interest is shown in the boiler operation. Tandex also introduced us to steam and condensate line treatment.

Every year we receive a very favourable report from the boiler inspector. Several of the inspectors have asked what type of treatment we are using to achieve such good results.

I have no hesitation in recommending Tandex boiler treatment chemicals to any boiler operator.

Yours faithfully
